 Comments:

24 HOUR FORM REC'D 05/04/2004; 6/1/2004 - 20 DAY REPORT Review - - -
 - (rec'd 5/14/2004); 550g heating oil UST removed on 4/26/2004;
 4/26/04 soil sample taken from beneath UST; Soil sample was taken at
 5' bls & analyzed for TPH - results, 11000 ppm heating oil range; No
 contam soils were removed at closure; No FP or GW in tank pit; Issued
 NORR stating minimum amt. Of contam soils weren't removed; Need to
 remove contam soils then collect follow up samples; 60 day time
 limit; -MAF /// 7/16/2004 - P-A for removal of contam soils;
 Consultant is asking for UST removal costs in excess of \$4500??,
 doesn't make sense, isn't reasonable; Amt. Requested - \$11596.50,
 amt. Approved - \$0.00 because 20 day report activities are not
 pre-approvable; -MAF, eligibility sent to co on 7/19/04-knm ///
 8/10/2004 - Spoke w/Cohesion to see if they would be filing any
 claims, they said they would not; EMS needed to know to proceed with
 P-A/Claims; (Cohesion said Ms. McKinney paid \$950 for closure of
 UST); -MAF /// 3/24/2005 - Rec'd a call from consultant, Scott
 Werley with EMS (596-0470); He said they sampled the source MW and
 the only constituent > 2L was benzene at 20 ppb - asked to resample;
 I said ok; -MAF /// 4/7/2005 - Rec'd call from consultant, said 2nd
 gw sample from same mw as above was 28 ppb (10x2L), wondered if he
 should move forward with a phase II LSA; I said no, just submit phase
 I; -MAF /// 4/22/2005 - LSA REVIEW - - - - (received 4/19/2005) -
 - - - Ust removed, 58.5 tons contaminated soils removed, depth of
 excavation is 15x15x9'deep; 5 soil samples collected post excavation
 that exceeded S2GW msc; LSA activities - - - no receptors; MW1
 installation - depth of well is 33' (bedrock encountered at 33'),
 depth to gw - 10', GW samples collected 3/8/2005 & 3/28/2005; GW >2L
 <GCL for benzene only / Soil >Residential for C9-22; REGULATORY
 ANALYSIS - Site is Low risk, Cleanup Requirements are- GCL &
 Residential MSCC, Soils exceed Resid MSCC, therefore, soils would
 need to be remediated for NFA, approving LSA; - MAF /// 5/24/2005 -
 P-A rec'd for SAR work; 4 soil borings to 9' (even though contam soil
 samples in LSA were collected at 12'; consultant said that gw is at
 10'); Madep analysis only since that was all that is > S2GW msc;
 Approved in full - \$3492; - MAF /// 8/11/2005 - Rec'd a call from
 consultant saying that 1 of the soil samples taken for the SAR was >
 Residential MSCC (and its under foundation of house); Spoke with
 Ashley McKinney & gave her 3 options- 1) Put a LUR on GW and Soil
 then issue NFA immediately 2) Remove contaminated soils beneath
 foundation & issue a NFA with no LUR (expensive) 3) Allow site to
 naturally attenuate since we know the Risk is Low and resample in one
 year to a year; She said she preferred option 3; So I am issuing a
 NORR stating that based upon sample results for the SAR the state
 will not require any additional work at this time and the soil and gw
 will be resampled in one year; -MAF /// 1/24/07 - SAR Addendum
 received: On 11/27/06 EMS returned to site to sample soil adj to
 GP-North. Boring terminated at 9' bls. Soils < Res MSCCs. Soils
 cleaned up to required standards, however, GW is > 2L. Recommends
 re-sampling of MW-1 to reduce concs below 2L so an NRP is not
 required. - CED /// 1/25/07 - NORR issued requesting no further
 assessment/remediation for soil & re-sampling of MW-1. - CED
 ///Recvd call from Ashley McKinney, 815-4055. She wants to see if
 mw1 is still contaminated; I recommended she contact most recent
 consultant, EMS, for quote for sampling and analysis.dmd, 9/13/10

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 123092

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

 Comments: 04/10/06 - 20-Day rpt submitted: Release discovered following advancement of soil borings either end of 550-gal heating oil UST. UST installed in 1942. Soils > TPH (77 mg/kg). UST to be removed in 04/06. - CED //// 06/26/06 - Spoke to Jonathan (terraquest). They removed UST and approx. 6.2 tons impacted soil. Could not removed any more soil due to restrictions. Hit rock at 7.5'. Base sample indicated C5-C8 at 120mg/kg. Not much above S-GW MSCC (72mg/kg). Sidewalls did not appear stained or odor. If proceed with LSA then nearest MW location would have to be 60+' away due to large trees/walls. Recommend attempting MW in center of tank pit with geoprobe. Try and collect soil samples and see if hit water, plus do receptor survey. - CED //// 07/12/06 - Site Check rpt submitted by terraquest: 550-gal heating oil UST removed 05/02/06. Approx. 6.2 tons impacted soil removed. Excavation was limited due to foundation/bedrock. Base soils (7.5') >TPH and C5-C8 > S-GW MSCCs. Recommend LSA as bedrock. - CED //// 07/12/06 - LSA submitted: Receptor survey indicated 1 irrigation WSW on UNC-CH Navy fields ~1480' away. No SWB, no WHP. MW installation attempted but could not be completed adj to UST pit. Nearest location would have been 60' feet downgradient - too far. Soil sample collected in base of UST pit at 9.5' bls. Soils < S-GW MSCCs. Recommends NFA. - CED //// 07/13/06 - NFA Issued - CED ////

 Comments: 02/16/07 - CED conducted site visit as Cedar Rock said impossible to install MW adj to UST pit as inaccessible due to trees. CED assessed area and rig could access site if small trees removed and since the whole property is to be demolished didn't see any reason why trees couldn't be taken down. LSA will be submitted prior to UST closure as UST was closed in place on 08/13/02. Once house is demolished, UST will be removed and contaminated soil excavated. - CED //// 02/17/07 - 24-Hour Release Reporting Form submitted. Release discovered following soil assessment adj to 560-gal heating oil UST on 02/16/07. - CED //// 03/12/07 - LSA submitted by Cedar Rock: No WSWs, No WHP, Meeting of the Waters creek ~ 300' W-NW. Bedrock encountered ~4' bls. MW installed to 50' bls - dry. Soils > Res MSCCs. Recommends NFA with NRP for soil only. - CED //// 03/14/07 - NORR issued requesting NRP for soil only - CED //// 05/04/07 - 20-Day rpt submitted: 20-day report submitted after LSA as house was being demolished and had to wait for this before soil could be excavated. On 04/6/07 a 560-gal heating oil (previously abandoned in place) was removed. Approx. 113.32 tons impacted soil removed. No FP. Over-excavation soil samples BDL. Recommends NFA with NO NRP/PN. - CED //// 05/07/07 - NFA Issued. - CED ////

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 119835.8

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 56884

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

g heating oil UST removed 9/27/2004; no contam soil was removed; no FP in pit; GW was in pit; 10/14/2004 one soil sample was collected from tank pit - analyzed per 8260, 8270, vph, eph; Soil > Residential MSCC for C11-22 Aro only (level detected- 690; resid mscc- 469); Consultant says they could not get heavy equipment in for soil removal and soil was too rocky to remove by hand; LSA NORR being issued since GW was detected in excavation; - 06/12/06 - Cedar Rock is the new consultant for the site. Discussed re-sampling around former boring B-1B in the center of the tank pit. Last sampling conducted 10/14/04 and only MADEP was > Res MSCCs. Resampling maybe indicate concs < Res MSCCs. Sample to be collected at same location as B-1B at 7.5' bls. - CED //// 06/19/06 - Bob Payne conducted soil assessment and MW installation. Hit auger refusal between 3 and 5' in center of tank pit. Attempted boring in native soil and hit same thing. Bedrock appears to be ~5'. Therefore Cohesions sample at 7.5' is in bedrock. MW installed to 50' bls. Will wait and see how GW looks and go from there. - CED //// 07/19/06 - LSA submitted by Cedar Rock: 1 irrigation WSW located ~1000', morgan creek ~350' S, no WHP. MW installed to 50' bls, PWR encountered 3' bls, DTW=21.66' bls. Soils could not be collected from desired location due to bedrock. No sample could be collected in native soil either as bedrock at ~1-2'. GW > 2L. Recommend NFA with NRP for GW only as no soil contam due to bedrock. - CED //// 07/24/06 - NORR issued for NRP for Soil and GW. - CED //// 10/05/06 - NRP received. - CED //// 10/9/06 - NFA issued for NRP(Soil and GW) and PN. - CED //// NRP recorded by Orange County Reg of Deeds 10/13/06, Book RB4141, Page 284-289, RKD. 11/1/06 - PN submitted. - CED ////

Comments: One 550 gallon heating oil tank was closed in place. It was located under a portion of the brick patio at the rear of the house. The tank was cleaned by pressure washing and filled with a flowable fill cement slurry on May 16, 2007. A soil sample was taken from soil 4 feet below the tank. A monitoring well was installed. Soil results exceeded soil to groundwater MSCC for 1,3,5-trimethylbenzene, total xylenes, and 2-methylnaphthalene, and exceeded Residentials MSCC's for c9-c18 aliphatics and c9-c22 aromatics. Ground water samples showed no petroleum constituents. No FR observed. Surrounding properties are on public water. - 07/02/07 - NRP AFILED. - CED////

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR PROPRIETARY RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.
